PhD	in Artificial Intelligence
Lecturer	Sciences Po, ESCP

The *leading*
AI-powered solution
for fashion players to
optimize trend forecasting

CHANEL LVMH COTY Dior la prairie UNIQLO BALENCIAGA BVLGARI

TIFFANY & CO. SHISEIDO BOUCHERON GUERLAIN Galeries Lafayette new balance adidas SKIMS

Of everything you produce, ***~40%*** is **never sold at full**

- Nearly **40%** — never sold at full price
- Up to **2.5–5 billion** excess garments a year — **$70–140bn** in value
- *McKinsey, State of Fashion 2025*

The real cost of bad decisions

- ✓ **Overstock** — you produced what didn't sell
- ✓ **Missed opportunity** — you didn't produce what would have sold

Both come from the same move: **guessing demand**

- ✓ Every unsold unit is margin lost **and** carbon spent for nothing
- ✓ Sizing the collection right isn't money *vs.* sustainability

Margin up, overproduction *down*, carbon down

Adopting a *data-driven mindset*

- ✓ **Look forward, not back** — anticipate demand, don't just react to last season
- ✓ **One shared language** — data bridges creative and merchandising
- ✓ **Democratize the signal** — design, buying, merch read the same numbers

Data *augments* taste — it doesn't replace it.

REAL-LIFE IMAGES TURNED INTO INSIGHTS

WE SEGMENT

We built representative panels across **16 regions**, 4 age segments (16-25, 26-35, 36-45, 45+) and 3 audience panels (edgy, trendy, and mainstream).

WE DETECT

Analyzing millions of social media images, our leading computer vision recognizes **2000+ key features**: colors, prints, shapes, fabrics and details.

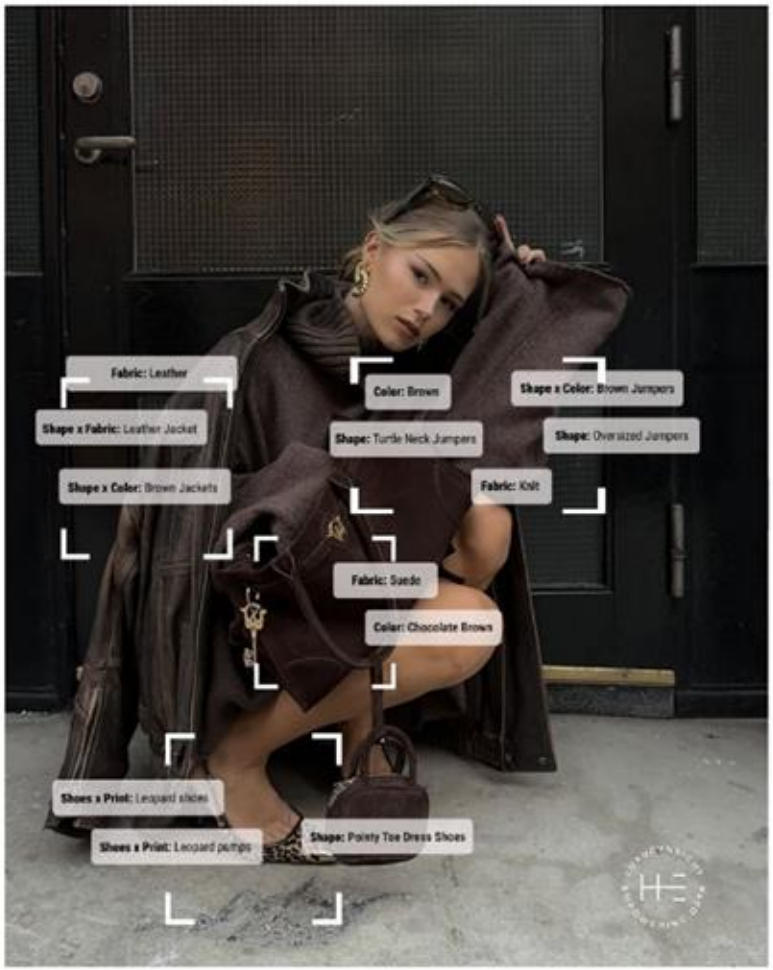

WE FORECAST

Our proprietary AI engine predicts demand **24-month in advance with over 90% accuracy**, providing brands with winning actionable insights.

THE POWER OF IMAGE RECOGNITION

Social Media is the goldmine of consumer insights - real & pure consumer intention through what they wear.

THE LEADING FASHION COMPUTER VISION MODEL:

- ✔ **Advanced Image Recognition:** Automatically identifying colors, prints, shapes, and fabrics in real-life contexts.
- ✔ **Turning Pixels into Insights:** We transform millions of social images into structured, actionable market data.
- ✔ **Unmatched Accuracy:** A proprietary AI engine that powers demand prediction with over 90% accuracy.

Data Process

A unique mix of **DATA TECHNOLOGY** **INDUSTRY EXPERTISE**

Recognized by leading research & media

VIVA TECHNOLOGY · bpifrance · VOGUE · WWD · FASHION NETWORK · CAPITAL · BOF · PREMIERE VISION

24-MONTH FORECAST WITH 91%+ ACCURACY

6 PhDs+
IN MACHINE LEARNING

First recipient
OF THE VIVATECH
LVMH INNOVATION AWARD

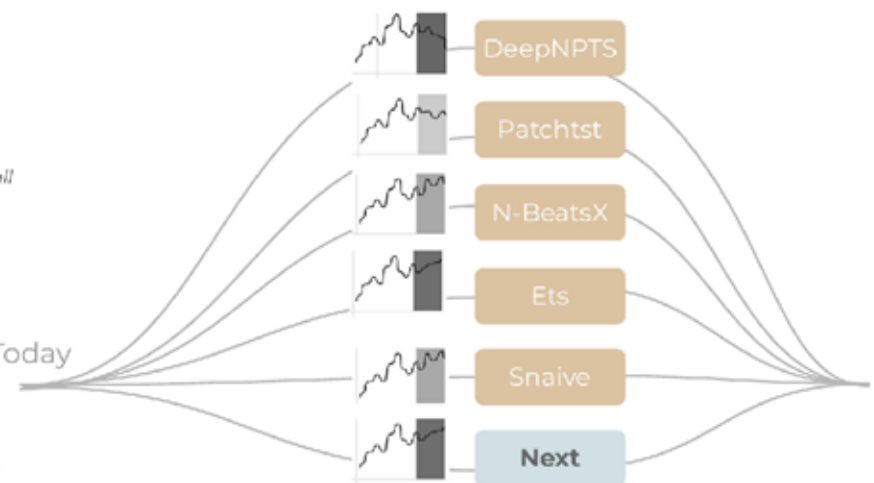

1 For each trend, **we retrieve 10+years of historical data** with all associated posts and other relevant extra signals such as influencer behaviours.

2 We apply different **specialized models & our proprietary deep learning model** to make predictions on how this trend will behave in the next 24 months.

3 We arbitrate between algorithms and combine predictions into a **master algorithm to obtain the best prediction** (Fforma ensembling).

**Data from the Unembellished Basketball Sneakers Trend for Women, in the US*

Medium

Heuritech Accuracy Report

This approach ensures brands see not just what's trending now, but how it will evolve — well before it peaks.

The two traps

Trap 1 — *non-actionable* data

- A dashboard of “rising trends” is **not a decision**
- Lots of data, few decisions
- The signal must land as a **quantity per SKU**, at the buy moment

Trap 2 — following *blindly*

- A spike is not a trend
- Tell a **passing fad** from a **structural shift**
- Hunter Green — called to peak Sept→Nov · track pants — a sustained rise

Knowing when *not* to follow

A trend worth investing in passes **three tests:**

- ✓ **High forecast growth** — rising, not peaking
- ✓ **Commercial magnitude** — enough volume to matter, not a niche
- ✓ **Adoption-stage fit** — matches where your customer sits

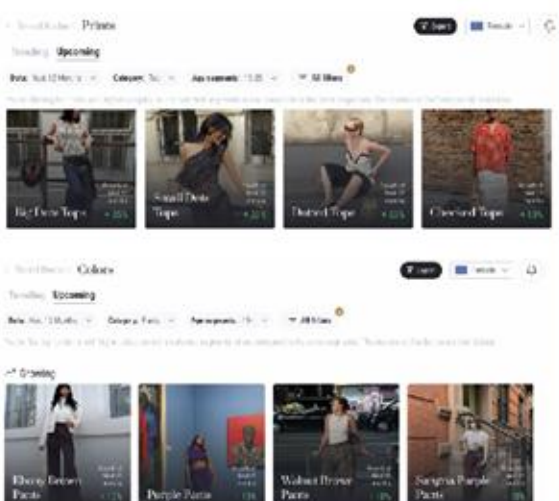

ACCESSING THE RIGHT CONSUMER DATA

For all segments, departments, geographies. In real time

1

Collection

Bet on the right colors, prints & shapes, **avoid waste** on declining ones. Adjust your assortment mix with market share forecasts.

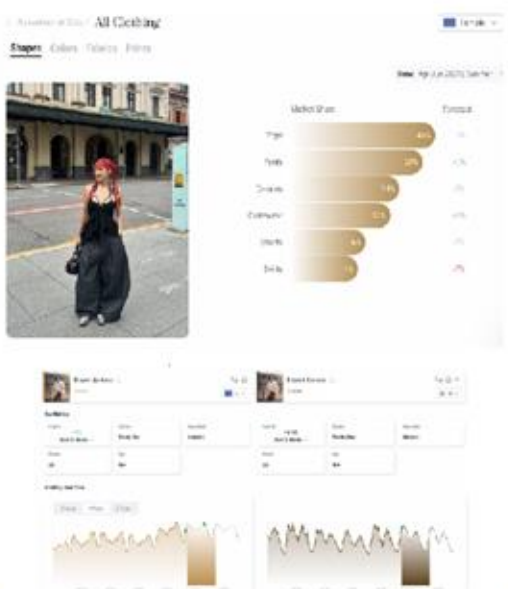

Build a balanced collection

2

Assortment

Optimize buy across categories & markets, **avoid over & out-of-stock**. Fuel retail partners with data to back choices.

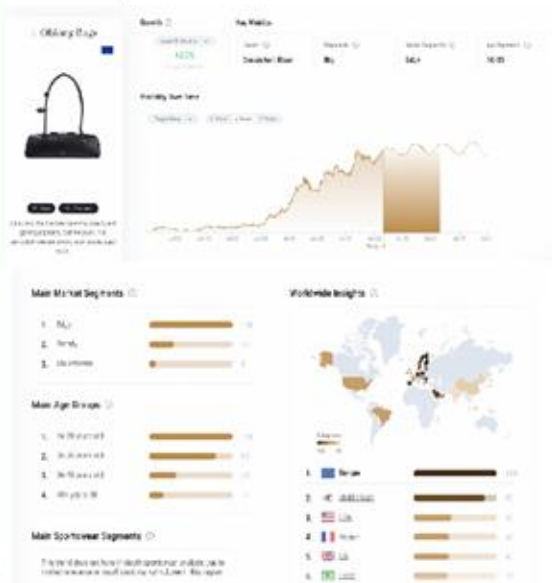

Increase sell-through

3

Marketing & VM

Push the **right products at the right time** with the right story for the right consumer in each market. Identify riskier products to discount.

Be reactive to market dynamics

Conclusion

Sizing a skirts collection

Contemporary womenswear, edgy women 18–35, €20–60, 6-month time-to-market.

- ✓ 3-criteria filter → **three trends selected**
- ✓ Collection 1 → **+5% sales**, **+3 pts sell-through**
- ✓ Collection 2 → **+9% sales**, **+2 pts sell-through**, end-of-season overstock cut

The opportunity *not taken*

- ✓ **50,000 square-toe boots — not produced**
- ✓ The trend was real, but wrong for this brand's customer
- ✓ Missed opportunity works both ways: sometimes the win is **not producing**

Three takeaways

To size your collection *right*

- ✓ **Overstock and missed opportunity are the same mistake** — guessing demand
- ✓ **Data helps only if it's actionable and triaged** — quantity per SKU, discipline to skip fads
- ✓ **Inject the signal at every link** — design to buying

Thank you. — Tony Pinville, Heuritech
